Rural Affairs

Spider mite population sampling

1. Mite samples should consist of plant host leaves and mites (at least 100 adult females). Leaves with mites should be placed in the Ziploc bag with a wet (but not dripping) paper towel. Do not overstuff the bag!

2. A sample label should follow the leaf and mite sample. It should be placed in the bag with mites.

Date

Location (as precise as you are willing to share, but at least to the level of city or town)

Crop

If possible, share the following information:

Hot spot control history (including for other pests and pathogens)

Hot spot description (house, row, infestation level, etc.)

General photo of hot spot

Other important notes

Some of this information can be sent electronically.

3. In hot weather samples should be shipped with a cold icepack to keep mites alive. Ship with pre-paid Purolator or FedEx to:

Vojislava Grbic - Attention of Vlad Zhurov and Joseane Nascimento
